

Adding Contacts to Use for Facetime By: Alycia M.

Before you begin installing this app, know that you must have an Apple device (Mac, ipod touch, iphone, etc.), or a Mac to be able to use it on.

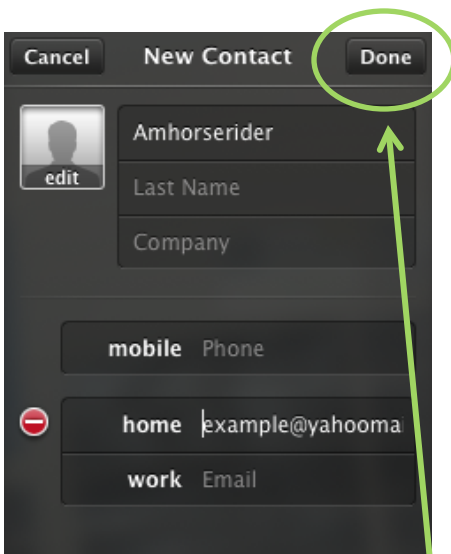

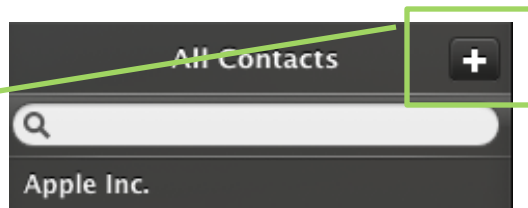

For Mobile Device:

1. Use the contacts from your address book. There is not a separate Facetime list for these contacts, so you should simply add contacts to your device.

For Mac:

3. Find the "plus" icon at the top of your contacts page and click it.

1. When you select the "done" button at the top of the sidebar, your contact will be complete and you can begin calling this contact.

2. A page will appear in the sidebar that asks for your contact's information. Fill out as much as desired, but there must be a first name and email.
